AGROMETEOROLOGY

Agrometeorology is the science that studies the interactions of hydrological and meteorological factors with the agricultural and forest ecosystems and with agriculture, in its broadest sense.

The fascination of our discipline lies in the vastness of an approach whose roots lie in Atmospheric Physics, in Biology and in Agronomy, as well as the ability to establish original connections between these topics, giving answers to specific problems.

Agrometeorology is therefore a real "boundary science", designed to enhance the links between all these lines of research that focus their attention on agricultural and forest ecosystems.

Join AIAM

If you want to become an Individual Member of AIAM, you just need to send a membership request to the email address: segreteria@agrometeorologia.it. Moreover, the Italian Association of AgroMeteorology provides the possibility of becoming Supporting Members to public bodies, private companies, research institutes, scientific associations and all other organizations. AIAM membership fee is fixed at 60 € for Individual Membership and at 300 € for Supporting Membership. Furthermore, AIAM membership includes a yearly subscription to the Italian Journal of Agrometeorology.

Moreover, all Supporting Members can display their logo on our website and have the right to attend the annual Aiam Congress with an exhibition stand.

For any further information, please visit the website www.agrometeorologia.it

AIAM

The Italian Association of Agrometeorology (AIAM) was founded in 1997 by a group of enthusiasts, now has more than a hundred of active members and houses a number of researchers and technicians from different origins (universities, research institutions, public service).

DIRECTIVE COUNCIL
2009-2012

PRESIDENT
Federico Spanna
VICEPRESIDENT
Francesco Ventura
COUNCILORS
Marco Acutis
Roberto Confalonieri
Bruno Di Lena
Pierpaolo Duce
Simone Orlandini
Donatella Spano
AUDITORS
Giovanni Dal Monte, Vittorio Marletto, Luigi Pasotti

The Association has the following purposes and objectives:

- to enhance, promote and protect the professional figure of the agrometeorologist;
- to encourage contacts between operators and the dissemination of information;
- to support initiatives of dissemination, training and updating;
- to assist the development of technical standards;
- to promote the connection between service and research activities;
- to guarantee the development of a network of relationships with associations and professional groups who work in meteorology, climatology, environment and agriculture.

OUR MISSION

AIAM collects, selects and publishes news of all the initiatives (conferences, workshops, courses, etc...) that can be a stimulus to the interest for those working or studying in the field of agrometeorology.

AIAM meeting

AIAM meets every year at a conference where the current topics of research and applications in agrometeorology are treated. Over the years, it has become a much-awaited meeting for the Italian agrometeorological community.

Courses

AIAM promotes the formation and the updating of its members, organizing courses and workshops on all those matters which are part of the professional and scientific education of a good agrometeorologist, from applied modelling to meteorology.

Awards

In order to facilitate the deepening of scientific knowledge in this field and to support the start-up for young scholars, AIAM annually announces a competition to award two theses (graduate, master or doctoral) on agrometeorological issues.
