A bit of history ...

AIAM was founded in 1997.

The group's expertise covers a wide range of knowledge including:

- agronomy,
- agrometeorology,
- climate change,
- precision farming and agriculture,
- botany,
- crop and weed physiology.

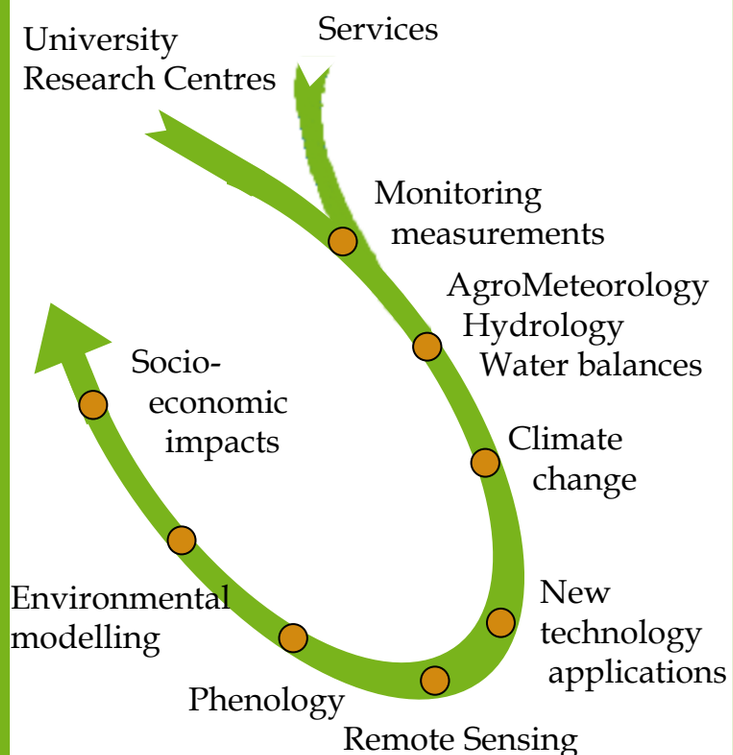

AIAM membership fee for the year 2026:
- € 20 Individual Membership
- € 400 for Supporting Membership.

The payment of the membership fee can be made by bank transfer to the Italian Association of Agrometeorology with the following IBAN: IT77F0306909606100000415154

Activities of the association:

- Annual conference.
- Publication of the journal *Italian Journal of Agrometeorology* every two months.
- Website of Italian Association of Agrometeorology.
- Prize for Master degree and doctoral theses.
- Specific training courses.

AIAM brings together researchers and technicians from different backgrounds in a single association:

- University
- Research Centres
- Services.

This enables it to effectively disseminate the results of research carried out by all these contributors to technicians and end users.

In addition, the association integrates different aspects of agro-meteorology, as indicated in the common objectives.

Objectives of the Association:

- to enhance, promote and protect the professional figure of the agrometeorologist;
- to encourage contacts between operators and the dissemination of information;
- to support dissemination, training and updating initiatives;
- to assist in the development of technical standards;
- to promote the connection between service and research activities;
- to develop and support the network of relationships between associations and professional groups that work in meteorology, climatology, environment and agriculture.
